

Assessment on-going in lecturer's class

Extra Work at home

Given WorkShop1 Database, The mobile device data is stored in a table named **tbl_Mobile**. The structure of the **tbl_Mobile** has been specified below:

Field Name	Type
mobileId	varchar(10) – Primary Key
description	varchar (250) – Not null
price	float
mobileName	varchar(20) – Not null
yearOfProduction	int
quantity	int
notSale	bit (0: sale)

The Application must be authenticated to identity the member that can be accessed the application in **tbl_User**

Field Name	Type
userId	varchar (20) – Primary Key
password	int – Not null
fullName	varchar (50) – Not Null
role	int (0: user, 1: manager, 2: staff)

Building the web site using MVC2 in JavaEE allows some functions as

- Login with staff user, and user

+ With staff,

- Search device with id or name

- Delete mobile on data grid

- Update price, description, quantity, and notSale of mobile on data grid

- Insert new mobile into DB

+ With user

- Search device with price in range [min, max]
- Add mobile to cart
- View mobile cart and remove items
- Store mobile to DB (student designs in his/her self)

All of function should be validated
